FILE 'REGISTRY' ENTERED AT 15:58:21 ON 12 AUG 2005
USE IS SUBJECT TO THE TERMS OF YOUR STN CUSTOMER AGREEMENT.
PLEASE SEE "HELP USAGETERMS" FOR DETAILS.
COPYRIGHT (C) 2005 American Chemical Society (ACS)

Property values tagged with IC are from the ZIC/VINITI data file provided by InfoChem.

STRUCTURE FILE UPDATES: 11 AUG 2005 HIGHEST RN 859751-76-1 DICTIONARY FILE UPDATES: 11 AUG 2005 HIGHEST RN 859751-76-1

New CAS Information Use Policies, enter HELP USAGETERMS for details.

TSCA INFORMATION NOW CURRENT THROUGH JANUARY 18, 2005

Please note that search-term pricing does apply when conducting SmartSELECT searches.

Structure search iteration limits have been increased. See HELP SLIMITS for details.

Experimental and calculated property data are now available. For more information enter HELP PROP at an arrow prompt in the file or refer to the file summary sheet on the web at: http://www.cas.org/ONLINE/DBSS/registryss.html

It is useful to probe the gene overexpressed in prosetate cancer epithelium and to analyse the differential expression of the EST. The PB39 gene that is dysregulated in prostate cancer is isolated from human pancreas CDNA library and has homology to the EST AAR00504. PB39 gene is located on chromosome 11pll.1-1-1.2. Abnormally high concentrations of PB39 are found in prostate tissue derived from prostate cancer (PC) epithelium. PB39 sequence is useful for detection of precancerous or cancer cells in the prostate. PB39 is useful for early diagnosis of the progression of prostate cancer, especially in aggressive prostate carcinoma. It can also distinguish PC from other non-neoplastic prostate disease. The diagnostic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAX91991-X97517 represent PCR primers used to amplify open reading frames and other nucleic acid sequences from the genome of Chlamydia pneumoniae (see AAX91990). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent oritis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34894 - AAX35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae especially where the vector directs the expression of a neutralising epitope of C. pneumoniae
                                                                                                                          Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Htrh; Ponh; HypC; YefW; ABC1; Omp100; Lawsonia intracellularis infection; vaccine; PCR primer; probe; 88.

The invention relates to an isolated polymucleotide molecule comprising a sequence encoding Lawsonia intracellularis HtrA, PonA, HypC, LysS, YcfW, Sequence encoding Lawsonia intracellularis HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 protein. The invention also relates to a genetic construct comprising a polymucleotide molecule that can be used to alter a Lawsonia or comprising a polymucleotide sequence of a htrA, ponA, hypC, lysS, OtfW, abc1 or omp100 gene, or its homologue, a substantial portion, or mutations capable of altering the above mentioned genes or a polymucleotide molecule comprising a sequence that naturally flanks in situ the ORF of the htrA, ponA, hypC, lysS, yoffW, abc1 or omp100 gene or its homologue. The invention also relates to a fusion protein of a colympetide of the invention further relates to a substantially pure polypeptide comprising an epitope of HtrA, PonA, HypC, LysS, YofW, ABC1 or Omp100 protein that is specifically reactive with anti-Lawsonia antibodies. The methods and compositions of the present invention are useful for the prevention and diagnosis of L. intracellularis infections in susceptible animals, such as pigs. Sequences ACA92344ACA92415.

C proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a new isolated polynucleotide molecule which encodes Lawsonia intracellularis HtrA, PonA, HypC, LysS, YcfW, ABCl or Omp100 protein.                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel isolated polypeptide derived from Lawsonia intracellularis. The invention may be useful for the development of compounds with an antibacterial activity or a vaccine. Specifically claimed are L intracellularis proteins, such as HtrA, PonA, HypC, LysS, YcfW, ABC1 and Omp100 proteins. The invention may be useful for the development of vaccines, diagnostic agents, or in preventing L intracellularis infections in susceptible animals such as pigs, for example porcine proliferative enteropathy. The present sequence is that of a PCR primer which was used for amplification and/or sequencing of a region of L intracellularis DNA during the exemplification of the
useful for the prevention and diagnosis of L. intracellularis infections in susceptible animals, such as pigs. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                antibacterial; vaccine; HtrA; PonA; HypC; LysS; YcfW; ABC1; Omp100; diagnostic agent; infection; pig; porcine proliferative enteropathy; PCR; primer; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Lawsonia intracellularis polypeptides, useful as vaccines, as diagnostic agents, or in preventing infections in susceptible animals such as pigs, e.g. porcine proliferative enteropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

```
The invention comprises the amino acid and coding sequences of the Lawsonia intracellularis proteins: HtrA, PonA, HypC, LysS, YcfW, ABC1, and Omp100. The DNA and protein sequences of the invention are useful for preventing Lawsonia intracellularis infection of animals (e.g. pig). The present DNA sequence was used in the exemplification of the invention. NOTE: The present sequence is not shown in the specification but was obtained from the Japanese Patent Office.

                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                              AAF85456-60 represent polynucleotide sequences from the unique region of exon 1 of a rabbit motilin receptor gene. The specification describes an unique sequence present in exon 1 of the motilin receptor, which is not present in human or Sphaeroides nephelus 7557 motilin receptor sequences. The unique nucleic acid sequence is useful for measuring the ability of a compound to affect motilin receptor activity. Motilin receptor polynucleotides and polypeptides are used to identify therapeutic compounds which are useful for treating gastrointestinal diseases and disorders such as gastric motility disorders, gastroparesis, irritable bowel syndrome, and diarrhoea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human prostate cancer (HPC)2 nucleic acids, polypeptides, and antibodies, useful for treatment and diagnosis of prostate cancer.
                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                          Novel polypeptides related to dog and rabbit motilin receptor polypeptide, comprising unique regions from dog and motilin receptor amino acid sequence, useful for identifying compounds for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; mouse; prostate cancer predisposing gene; HPC2;

The invention relates to a human prostate cancer predisposing gene coding for an HPC2 polypeptide. The DNA and protein sequences are useful as diagnostic reagents for identifying a mutant HPC2 nucleotide sequence in a suspected mutant HPC2 allele by comparing the sequence of the suspected mutant HPC2 allele with a wild-type HPC2 sequence. The sequences are also useful for detecting an alteration in HPC2, where the alteration is associated with cancer in a human. The method involves analysing an HPC2 gene or an HPC2 gene expression product from a tissue of the human. The HPC2 gene is useful as a marker for prostate cancer and can be used in gene therapy techniques to suppress neoplastic growth of recipient cells which carry the mutant HPC2 allele. The sequences represent primers used in the methods of the invention, cDNA encoding human and mouse HPC2 and cDNA encoding HPC2 paralogues and orthologues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                           The present sequence is a primer used in the isolation of the human and murine prostate cancer predisposing genes HPC2 and Mm.HPC2. The human version of the gene is found on chromosome 17p. Some alleles cause a predisposition to cancer, particularly prostate cancer. This gene and its protein can be used in peptide and gene therapy for cancer patients, as well as being useful as diagnostic tools (both for cancer sufferers and those with a predisposition to the disease) and in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acid sequence encoding HPC2 polypeptide, which is marker for prostate cancer, is useful in gene therapy techniques to restore HPC2 normal levels by which neoplastic growth is suppressed in recipient cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             88;

The present invention relates to a new method of making selectively randomised synthetic oligonucleotides. The method involves deprotecting starting material at 3' position, which is coupled to support in nucleic acid synthesiser, coupling dinuclectide phosphoramidite to 3' position, deprotecting the new 3' position of extended oligonucleotide, coupling mononucleotide phosphoramidite to the 3' position and repeating coupling steps until desired length oligonucleotide is obtained. The method of the invention is useful for making selectively randomised synthetic cligonucleotides. Unlike prior art techniques, the method provides randomised oligonucleotides without the problems of NNN randomisation, without having to resort to complicated resin-splitting procedures or the use of low coupling efficiency trinucleotide phosphoramidites. The present nucleic acid sequence represents one of a collection (ABK87646. ABK87669 and ABK87671-ABK87676) of synthetic oligonucleotides that were used in the invention for selective randomisation of zinc finger protein
                                                                                                                                                                                                                                                                                                                                                                                                                                             Making selectively randomized synthetic oligonucleotide by utilizing phosphoramidite dinucleotide and mononucleotide synthesis strategy, where a deprotecting step is performed after each coupling step.
Synthetic oligo #21, for selective randomisation of zinc finger protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transforming growth factor-beta 3 antisense oligonucleotide, SEQ ID 75.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The primers AAT33009-10 were used to amplify a fragment of the gene encoding a mouse SRY-related protein (AAT33007). This primer corresp. to bases 7156-7175 of the mouse gene. The amplified fragment was used to screen a mouse genomic library. The screen isolated 4 EcoRI fragments of 2.3, 2.8, 3.5 and 1.5 kb covering the gene. Sequence analysis revealed a 240 bp HMG box sequence between bases 7154-7393. Similarity with the thuman SRY HMG box sequence resulted in primers being generated to amplify the human SRY HMG box sequence for use as a probe to isolate the bowine SRY-related gene (AAT33008). The mouse and bowine genes are useful for determining the sex of an animal prior to birth

Walker MG:

```
The invention relates to a method of predicting clinical outcome for a patient diagnosed with cancer by determining the expression level of one cor more genes, or their expression products, selected from p53BP2, cathepsin B, cathepsin L, Ki6/7/MiBL, and thymidine Kinase in a cancer tissue obtained from the patient, normalized against control gene(s), and compared to the amount found in a reference cancer tissue set. The specification also discloses an array comprising polynucleotides by printing genes: FOXMI, PRAME, B612, STK15, CEGP1, Ki-CT, GSTMI, CA9, PR, BBC3, MBL1, SURV, GATA3, TFRC, YB-1, DPYD, GSTM3, CRESKEN, Sro, Chk1, IDI, BERRI, P27, CCMBI, XIAP, Chk2, CDC25B, IGFIR, CCC, MR93A, NRKB65B, BRCA2, EGFR, TK1, VDR, Contig51037, pENTI, EPHXI, IFIA, CCCH, HIPPI, IGFBP3, GTSB, HerZ and DIABLO, immobilized on a solid surface. The methods are useful for predicting clinical outcome for a satient diagnosed with cancer, classifying cancer, and predicting the clikelihood of long-term survival of a breast cancer patient, or a patient cancer patient, or a patient cancer patient.
                                                                                   Predicting clinical outcome for a patient diagnosed with cancer comprises determining the expression level of one or more genes, and compared to the amount found in a reference cancer tissue set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PCR primer to amplify a human cancer prognostic marker DNA SeqID 188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human; primer; PCR; prognostic marker; BGFR; epidermal growth factor receptor; cancer; gene expression profiling; microarray; head and neck cancer; colon cancer; metastatic spread;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        positive invasive breast cancer. This sequence corresponds to an oligonucleotide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   58.2%; Score 12.8; DB 10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to antisense oligonucleotides (ADA66459-ADA66609), which inhibit Transforming Growth Factor (TGF) beta-3 sepression. The oligonucleotides are useful for inhibiting the expression of TGF-beta3 in cells or tissues, and for treating an animal having a disease condition associated with TGF-beta3, e.g. a hyperproliferative disorder such as cancers of lung, liver, colon, oesophagus, pancreas, breast, skin or haematopoletic, atherosclerosis, rheumatoid arthritis, preeclampsia and fibrosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel antisense compound which is targeted to nucleic acid encoding transforming growth factor beta-3, and inhibits expression of TGF-beta 3, useful for treating a condition associated with TGF-beta 3, e.g. cancer.
                                               /notē= "This oligonucleotide has a phosphorothioate backbone and 2-"methyoxyethyl (2'-MOE) wings at the 5' and 3' ends, which are 5 nucleotides in length. Also all cytidine residues are 5-methylcytidines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

This invention relates to a novel method concerning prognostic markers associated with EGRR (epidermal growth factor receptor) positive cancer. Specifically, it refers to a gene expression profiling method that can provide a prediction as to whether a patient is likely to respond well to treatment with an EGRR inhibitor. The present invention describes the commandate of the RNA transcript of at least one gene selected from the group of CD4445, CD4446, DR5, GR01, KR17, LAMC2 or their products thereof. It further provides a cDNA microarray contraining mamed genes that represent prognostic transcripts which are useful for determining whether a patient diagnosed with an EGRR expressing head or neck cancer or colon cancer exhibits elevated or cancer expression levels of these genes compared to normal. As such, these methods are also useful for prognosing or predicting the likelihood of cancer-attributable death or prognosing or predicting the likelihood of cancer-attributable death or prognession, including recurrence and metastatic spread of a neoplastic disease, as well as drug resistance. This oligonucleotide sequence is a PCR primer used to amplify a human PCR amplicon DNA sequence used as a prognostic cancer marker, given in an exemplification of the invention.
Prognosing a patient with EGFR-expressing colon cancer comprises subjecting a sample comprising EGFR-expressing cancer cells to quantitative analysis of the expression level of the RNA transcript of at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 21 BP; 5 A; 6 C; 5 G; 5 T; 0 U; 0 Other;

Predicting likelihood of long-term survival of a breast cancer patient without the recurrence of breast cancer by determining the expression level of prognostic RNA transcripts or their expression products in a breast cancer tissue sample.

Claim 33; SEQ ID NO 191; 125pp; English

```
The present invention relates to a method for predicting the likelihood of long-term survival of a breast cancer patient without the recurrence of breast cancer. The method comprises determining the expression level of one or more prognostic RNA transcripts or their expression products in a breast cancer tissue sample obtained from the patient. The prognostic RNA transcript is the transcript of one or more genes, e.g. TP513BP2, CR SRP, CD68, Bcl2, KRT14, RIZ1, ALB1, SURV, BBC3, IGFIR, p27, GATA3, CCGP1, STK15, GSTM1, FHT7, RIZ1, ALB1, SURV, BBC3, IGFIR, p27, GATA3, CCGP1, STK15, GSTM1, FHT7, RIZ1, ALB1, SURV, BBC3, IGFIR, p27, GATA3, CCGP1, STK, CD68, CCCGP1, STK, CD68, CCCCC, CKRT19, TS, Herz, KKK10, beta-catenin, gamma-catenin, Green or more of GRB7, CD68, CCCC, CKM19, FBXO5, or DR5, where expression of one or more of CTS1, CKM1, ALB1, CCNB1, MCM2, FBXO5, Herz, STK15, SURV, EGFR, MYBL2, CTS1, CKM1, ALB1, CCNB1, MCM2, FBXO5, Herz, STK15, SURV, EGFR, MYBL2, CCTS1, CKM1, BCM2, FBXO5, Herz, STK15, SURV, EGFR, MYBL2, CCTS1, CKM1, GATA3, CATA3, CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a Single Condition Amplification/
Internal Primer (SCAIP) sequencing method for direct sequence analysis of
large multi-exon genes from genomic DNA samples and identifying mutations
in multi-exon genes e.g. the dystrophin gene, CAPN3 gene and DYSF gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Characterizing a nucleic acid region, useful for detecting genetic

                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
       Dystrophy (DMD) and Becker Museular Dystrophy (BMD). Mutations in the CAPN3 gene, encoding calpain (calcium-activated neutral protease) result can limb-girdle muscular dystrophy type 2A (LGMD2A) and mutations in the DYSF gene, encoding dysferlin, result in limb-girdle muscular dystrophy type 2A (LGMD2A) and mutations in the DYSF gene, encoding dysferlin, result in limb-girdle muscular dystrophy type 2B (LGMD2B). The method comprises bringing into contact in each of the reaction chambers an amplicon from a different one of the amplicant or reactions and one or more internal sequencing primers corresponding to the amplicon and analysing the sequences of the amplicans. The method allows for the rapid, accurate, and economical canalysis of any large multi-exon gene. It is also useful in detecting genetic mutations in any large multi-exon gene. It is also useful for the identification and analysis of specific individual genomic mutations including deletions, point mutations, or its combinations, gene complexes with multiple exons/introms spanning large genomic regions. The present sequence is a PCR primer, used in the method of the invention.
                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               G protein coupled receptor; GPCR; signal transduction pathway; G protein; Alzheimer's disease; Parkinson's disease; diabetes; dwarfism; colour blindness; retinal pigmentosa; asthma; depression; schizophrenia; sleeplessness; hypertension; anxiety; stress; renal failure; cardiovascular disorder; neural disorder; oncology disorder; immune disorder; neuroprotective; gene therapy; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to novel G protein coupled receptors (GPCRs) and their encoding nucleotide sequences. Many medically significant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid, useful for manufacturing a medicament for preventing, treating or ameliorating a medical condition e.g., neural disorder.
                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human G-protein coupled receptor (GPCR) related PCR primer Seg ID44.

biological processes are mediated by proteins participating in signal transduction pathways involving G proteins. GPCRs are one of the largest receptor superfamilies known. These receptors are biologically important and malfunction of these receptors results in diseases such as Alzheimer's, Parkinson's, diabetes, dwarfism, colour blindness, retinal pigmentosa and asthma. They are also involved in depression, schizophrenia, sleeplesaness, hypertension, anxiety, stress, renal failure and other cardiovascular, neural, oncology and immune disorders. A modulator of the GPCRs of the invention may have neuroprotective activity whilst the sequences of the invention may be useful for gene cherapy. The invention may also be useful for manufacturing a medicament for preventing, treating or ameliotating a medical condition. The present sequence is that of a PCR primer which was used for amplification of a certain of a gene encoding a human GPCR during the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                         The invention relates to an isolated human G protein-coupled receptor collypsecide and its encoding polyuncheoride, including the full length proteins rains the start methionine (and the region of the polybuncheoride encoding this protein region). The proteins are designated HGRBMY10-1, HGRBMY41-1, HGRBMY41-1, HGRBMY41-2, HGRBMY41-1, HGRBMY41-2, HGRBMY41-2, HGRBMY41-1, HGRBMY41-2, HGRBMY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a mutant or transformed plant comprising mutated forms of ethylene-response DNN-binding factors (edf)1, edf2, edf3 and edf4 genes such that the plant exhibits a decreased response to ethylene, and comprises fruit which ripens more slowly than a wild-type version of the plant. The transgenic plants having reduced sensitivity to ethylene ethylene is involved in floral landustry and fruit processing industries. Since ethylene is involved in floral sensecence, the modified plants have leafy vegetables provide higher yields due to decreased floral initiation, since the transformed plants do not bolt or flower easily. The plants provide fruits which ripens more slowly than the wild-type version of the plant, and thus are advantageous in post-harvest and transportations. This polymucleotide sequence represents a PCR primer relating to the ethylene sensitivity modulation process of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel mutant or transformed plant comprising mutated forms of edf1, edf2, edf3 and edf4 genes, and having decreased ethylene sensitivity, such that its fruit ripens more slowly than wild-type version of the plant.

                                                                                                                                                                                                          The sequences given in AAQ45198-200 and AAQ61687-777 are primers which were used in the isolation and amplification of the genomic sequence of the hepatitis E virus (HEV) strain SAR-55. These primers were based on sequences derived from the SAR-55 strain and a strain from Burma (BUR-121). The amplified sequence contains three open reading frames (GRFs). The proteins encoded by this sequence can be used to stimulate the production of protective antibodies upon injection into a mammal that would serve to protect the mammal upon challenge with wild type HEV. The proteins can be used for detection and diagnosis of HEV infection. This CDNA was isolated from primates innoculated with stool suspensions

The SAR strain SAR-55 cDNA. The Protein encoded by the structural region of the virus (i.e. ORF-2), which is capable of forming HEV like particles, is useful for the detection of HEV antibodies (pref. IgG or IgM) in blood, plasma, sera, cerebrospinal fluid, tissue, urine or pleural fluid. The protein, and anti-HEV antibodies generated using the protein, can also be used in vaccines for immunising an animal against HEV infection. The protein is identified as a band of greater than 50 kD following SDS-PAGE of cell lysates of insect cells infected with a HEV ORF-2 coneg. baculovirus, i.e. the claimed recombinant expression vectors pPIC9-1779,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    oben
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New hepatitis E virus DNA from Pakistani strain SAR-55 - used for, e.g. developing products for diagnosis of, and vaccination against hepatitis virus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequences AAV71605 to AAV71698 represent primers used for PCR amplification of the hepatitis E virus (HEV) DNA SAR-55 encoding the reading frame (DRF) proteins ORF-1, ORF-2 and ORF-1. A host organism transformed or transfected with a recombinant expression vector containing the SAR-55 nucleic acid can be used to produce the HEV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Hepatitis E virus, HEV, SAR-55; diagnostic agent, vaccine, antibody, passive immunisation; open reading frame; ORF; PCR primer, ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAZ65554 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ7440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and disgnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from differential efficacious responses to and side effects from by apparamentical acting on a disease as well as other treatment.

N.B. The SEQ ID NOS 2852, 2313, 2374, 3035, 3157, are not actually given a sequence in the Sequence Listing from the
          used as diagnostic agents and as vaccines for use against HEV infection. The detection of antibodies specific for HEV can be used for the diagnosis of infection and diseases caused by HEV, and for monitoring the progression of such disease. Such methods are also useful for monitoring the efficacy of therapeutic agents during the course of treatment of HEV infection and disease in a mammal. The antibodies can be used for detection or for passive immunisation of mammals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel biallelic markers used to construct a high density disequilibrium

Also described: (a) an antisense compound up to 30 bases in length which inhibits the expression of human Tailin; (b) a composition (II) comprising (1) or (a), and (c) inhibiting the expression of human Tailin in human cells or tissues comprising contacting the cells or tissues comprising contacting the cells or tissues to an order of the cells or and can be used in antisense gene therapy and as a Tailn expression inhibitor. (I) can be used: to inhibit the expression of human Tailin in human cells or tissues; to prevent or delay infection, inflammation or tumour formation; and in diagnostics, the present therapeutics, prophylaxis, and in research reagents and kits. The present
                                                                                                                                                                                                                                                                                                                                               Human; Talin; antimicrobial; antiinflammatory; cytostatic; inhibitor; antisense gene therapy; infection; inflammation; Talin inhibitor; tumour; antisense oligonucleotide; phosphorothioate; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences ADG90460-ADG90539 represent phosphorothioate targeted to the human talin gene, which inhibit its expression. The antisense were designed to target different regions of human talin RNA, and were analysed for their effect on talin expression by quantitative real-time PCR. Talin is a cytoplasmic protein which links cytoskeletal proteins extracellular matrix to other cells. It is thought to be involved in the regulation of cellular adhesion and cell morphology. Talin is highly
         oligonucleotide, having 2'-methoxyethyl (2'-MOE) wings of 5 nucleotides at the 5' and 3' ends and a 10 nucleotide deoxy gap in the middle, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "This oligonucleotide has a phosphorothioate backbone and 2-methyoxyethy1 (2-MOE) wings at the 5' and 3' ends, which are 5 nucleotides in length. Also all cytosine nucleotides are 5-methylcytosines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoding human Talin, useful for inhibiting the expression of human Ta
and for treating a human having a disease or condition associated with

                           subcellular distribution differs between resting non-adhesive platelets and activated adhesive platelets. It could also play a major role in determining muscle strength and cardiac function as it has been found to participate in the transmission of contractile force to the extracellular matrix in cardiomyocytes, and exhibits mechanical loading-dependent expression at myotendinous junctions. The expression of talin is downregulated by androgens in prostate tissues, a phenomenon known to contribute to the development of prostate cancer. The oligonaclectides of the invention are useful for diagnosis, prevention and treatment of talin related disorders, such as those related to callular adhesion. The present sequence represents a human c-Ha-ras phosphorothicate antisense oligonuclectide used as a positive control in determining optimal oligonuclectide concentration for a particular cell line.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises antisense oligonucleotides that are targeted to the nucleic acid encoding transforming.growth factor beta (TGF-beta) receptor II. The antisense oligonucleotides of the invention are useful for treating: hyperproliferative disorders (e.g. breast cancer), or an autoimmune disorder (e.g. rhematoid arthritis). The present DNA sequence represents a 2'-O-methoxyethyl gapmer oligonucleotide with a phosphorothioate backbone that is targeted to human TGF-beta receptor II.
expressed in platelets, and may play a role in platelet adhesion as its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New compound having a sequence targeted to a nucleic acid encoding
Transforming growth factor beta-receptor II, useful for preparing a
composition for treating hyperproliferative disorder e.g., lung, liver,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transforming growth factor beta receptor II; TGF-beta receptor II; hyperproliferative disorder; breast cancer; autoimmune disorder; rheumatoid arthritis; 2'-0-methoxyethyl gapmer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human TGF-beta receptor II targeted antisense oligonucleotide #31

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method for detecting microorganisms using primers (ADF90918-ADF91145). The method is used for detecting microorganisms (bacteria, fungi, protozoa, viruses) which cause diarrhoea symptoms, and pathogenic microbe of food poisoning. The method can be used to detect unspecified microbes, or specific pathogens, or for the simultaneous detection of many kinds of microorganism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rapid, sensitive detection of specific or unspecified microbes causing

The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a comparing a respiratory, and cytostatic activity. The composition may have a conse in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or therapeutic respiratory effect of an autiinflammatory steroid in a subject, for reducing levels of condition, also of, or reducing sensitivity to adenosine, reducing levels of denosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at figure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstruction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered or the composition of treating a respiratory, lung or malignant disease. composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, oystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary the oligonuclectides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypotremaion; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer. transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of Pharmaceutical composition for treating asthma, has antisense oligonuclectide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and antisense; bronchoconstriction; allergy; hyposecretion; pain; Claim 15; SEQ ID NO 1721; 763pp; English. acid molecule encoding human Talin to and inhibit its expression. The invention is useful for treating a disease or condition associated with Talin such as a disease or condition e.g. muscular, haematologic, cardiac or hyperproliferative disorder such as cancer. The present sequence is an antisense oilgonucleotide targeted to human Talin DNA. invention relates to novel antisense compounds targeted to a nucleic

The invention relates to a set of novel map-related biallelic markers, preferably located on obesity disorder-associated chromosomal regions on estimates, i. I o and 19. The markers are useful for genotyping or estimating the frequency of an allele in a population, for detecting an association between a genotype or haplotype and a phenotype, e.g. a disease involving drug responses, obesity or disorders related to obesity, such as hyperuricaemia, digestive pathology, hepatic function disorders, cancer, cardiovascular disease, hypertension, hyperlipidaemia, insulin disorders, atheromatous disease and cardiac insufficiency. The marker are useful for detecting a statistical correlation between a biallelic marker haplotype and a phenotype and/or between a biallelic marker haplotype and a phenotype. This sequence represents a PCR primer used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Set of novel map-related biallelic markers, preferably located on obesity disorder-associated chromosomal regions on chromosomes 3, 10 and 19, useful, for e.g. detecting statistical correlations between marker allele and a phenotype.
drug response; hyperuricaemia; digestive pathology; hypertension; cancer; hepatic function disorder; cardiovascular disease; hyperlipidaemia; PCR; insulin disorder; atheromatous disease; cardiac insufficiency; primer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose susceptibility to diseases of the cardiovascular, endocrine and neurological systems, such as coronary artery disease, echizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's

AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ740 represent amplification conclined as a parameter. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and mathods of the invention can also be useful for the accomplex asponses to an also be useful for the dentification of the targets for the development of pharmaceutical agents and disapnostic methods, as well as the characterisation of the cificacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment. The SEQ ID NOS 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and 3367, are not actually given a sequence in the Sequence Listing from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic oligo #15, for selective randomisation of zinc finger protein.
                                                                                                                                                                                                                                                                                    Novel biallelic markers used to construct a high density disequilibrium map of the human genome.

                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a DNA fragment with a cold-inducible promoter activity which occurs in the non-translational region in the 5'-
bystream side of a gene selected from the 259 specified Saccharomyces cerevisiae genes given in the specification (G) e.g. YALO14C and YPRZ00C.

Also described: (1) a similar DNA fragment containing: (a) a DNA derived from any of the specified DNA fragments (G) but with some bases deleted, substituted or added; or (b) a DNA hybridisable with a DNA fragment containing a base sequence complementary to any of the specified DNA fragment containing a cis sequence of DNA sequence of B: GAGATGAG; (3) a DNA fragment containing a cis sequence of bus sequence of B: GAGATGAG; (3) a DNA fragment with cold-inducible promoter activity containing; (a) a DNA fragment in (2) but with some bases deleted, an expression vector containing any of the DNA fragment in (2); (4) an expression vector containing any of the DNA fragment in (2); (4) an expression vector containing any of the DNA fragment in (2); (4) an expression vector containing any of the postession vector; (5) production by culturing the transformant at a low temperature; and (7) controlling RNA production by culturing the transformant at a low temperature; and for temperature inducible in constructing vectors and expression systems to produce difficult-to-obtain proteins and for regulating RNA production as well as in studying the molecular mechanism of low-temperature inducibility. The present sequence represents a PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                  Yeast-originated promoters with cold-inducible activity for constructing vectors and expression systems to produce difficult-to-obtain proteins and for regulating RNA production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human biallelic marker downstream amplification primer SEQ ID NO:9693.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present invention relates to a new method of making selectively randomised synthetic oligonucleotides. The method involves deprotecting starting material at 3 position, which is coupled to support in nucleic card synthesiser, coupling dinucleotide phosphoramidite to 3 position and repeating coupling monouncleotide phosphoramidite to the 3 position and repeating coupling monouncleotide phosphoramidite to the 3 position and repeating coupling reps until desired length oligonucleotide is obtained. The method of the invention is useful for making selectively randomised synthetic oligonucleotides. Unlike prior art techniques, the method provides candomised oligonucleotides without the problems of NNN randomisation, without having to resort to complicated resin-splitting procedures or the use of low coupling efficiency trinucleotide phosphoramidites. The present nucleic acid sequence represents one of a collection (ABK87646-ABK87669 and ABK87676) of synthetic oligonucleotides that were used in the invention for selective randomisation of zinc finger protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
Making selectively randomized synthetic oligonucleotide by utilizing phosphoramidite dinucleotide and mononucleotide synthesis strategy, where a deprotecting step is performed after each coupling step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human; ss; liver related homologue-1; LRH1; NR5A2; antisense; phosphorothioate; 2' MOE; breast cancer; dyslipidaemia; atherosclerosis; low HDL; high density lipoprotein; high LDL; hypercholesterolaemia; gall stone; triglyceridaemia; obesity; hepatitis; hepatocellular carcinoma; aromatase; cytostatic; antilipaemic; antiarteriosclerotic; anorectic; hepatotropic; litholytic;

This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in clength that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NRBA2). LRH1 is a monomeric orphan complex receptor protein that functions as a tissue specific corphan actor. The present invention describes antisense coligonucleotides that comprise at least one modified internucleoside oligonucleotides that comprise at least one modified sugar moiety, a 2'-0-methoxyethyl (2' MOE) and at least one modified sugar moiety, confines the sancisense compounds are useful for treating or diagnosing a disease associated with LRH1, such as breast cancer, disploidaemia, atherosclerosis, low HDL (high density lipoprotein), high corporation, hyperrolesterolaemia, gall stones, confining an expectation as well as hepatocellular carcinoma or a condition associated with aromatase activity, Accordingly, these compositions exhibit cytostatic, antilipaemic, antiarteriosclerotic, anorectic, hepatotropic, clibolytic, antilipaemic, antiarteriosclerotic, anorectic, hepatotropic, coligonucleotides sequence is an antisense DNA oligo used to modulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vascular endothelial growth factor; ss; antisense compound; phosphorothioate linkage; 2'-O-methoxyethyl sugar moiety; 5'-methylcytosine; antisense oligonucleotide; diabetes; immunological disorder; cardiovascular disorder; neurological disorder; tardiovascular disorder; neurological tisorder; ischaemia; reperfusion injury; cancer; angiogenic disorder; haemangioma; tumour angiogenesis; rheumatoid arthritis; atherosclerosis; psoriasis; fibrosis; myocardial infarction; wound healing; bone fracture; cartilage damage; tissue regeneration; organ regeneration; periodontal disease; gut regeneration; atrial fibrillation.
                                                                                                                                                                                                                                         New antisense oligonucleotides targeted to a nucleic acid encoding liver related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human VEGF co-regulated chemokine-1 DNA antisense oligonucleotide #620.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   54.5%; Score 12; DB 12; Length 20; 75.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antisense compound targeted to a nucleic acid molecule encoding human vascular endothelial growth factor (VEGF) corregulated chemokine-1 (VCC-1), and which specifically hybridises with and inhibits the expression of VCC-1. The invention also relates to a composition comprising the antisense compound, a method of inhibiting the expression of VCC-1 in cells or tissues compound, a method of inhibiting the carries of VCC-1 in cells or tissues compound and a method of treating a human of varing a disease or condition associated with VCC-1 comprising a disease or condition associated with VCC-1 comprising comprises at least one modified of internucleoside linkage, preferably a phosphorothicate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-0-comprises at least one modified sugar moiety, preferably a 2'-0-comprises at least one modified sugar moiety, preferably a 2'-0-comprises at least one modified sugar moiety, preferably a 2'-0-comprises at least one condition associated with VCC-1 such as diabetes, a chimeric oligonucleotide. The antisense oligonucleotide preferably contracting a disease or condition associated with VCC-1, such as diabetes, an immunological disorder, a cardiovascular disorder, a neurological disorder, a cardiovascular disorder, a neurological configurable of the sorder, inchemial or fibrosis after myocardial infarction. VCC-1 antisense oligonucleotides may also be used for wound healing, for treating periodomial diseases, for gut protection or regeneration, for treatment of Indig or liver fibrosis or for management of atrial fibrillation. This sequence represents an antisense management of atrial fibrillation. This sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; ribozyme therapy; hairpin ribozyme; hammerhead ribozyme;
recognition site; target; ribozyme binding site; eye disease; vulnerary;
proliferative disease; skin disease; psoriasis; diabetic retinopathy;

The present invention describes a method for treating a proliferative skin or eye disease and scarring. The method involves administering a ribozyme (1) which clasaves RNA encoding a cytokine involved in inflammation, matrix metalloproteinase (MMP), cyclin, cell-cycle dependent kinase, growth factor or a reductase, or administering a nucleic acid molecule (II) comprising a promoter operably linked to a nucleic acid segment encoding (I). (I) can have antipsoriatic, dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling, dermatological, cytostatic, antiseborrheic, antidiabetic, antisickling, cophthalmological, vulnerary, keratolytic and virucide activities, and cleaves RNA encoding cytokine involved in inflammation. (I) can be used in gene therapy. (I) and (II) are useful for treating proliferative skin diseases such as psoriasis, atopic dermatitis, actinic keracosis, caquamous or basal cell carcinoma and viral or seborrheic wart. They can also be used for treating proliferative eye diseases such as diabetic retinopathy, virreoretinopathy, sickle cell retinopathy, correctinopathy, sickle cell retinopathy, of prematurity and retinal detachment, and for treating and preventing scarring such as keloid, adhesion and hypertrophic or hypertrophic burn and correcting and preventing scarring such as keloid, adhesion and hypertrophic or hypertrophic burn and correcting and preventing scarring such as keloid, adhesion and hypertrophic or hypertrophic burn and correcting and preventing and control or sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
Treating proliferative skin or eye diseases and scarring, using ribozymes that cleave RNA encoding cytokines involved in inflammation, matrix metalloproteinases, growth factors and cell-cycle dependent kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human nucleic acid sequences (1; ADO15739-ADO15912) obtained from 4 synthesis-period (stage 4S) of neuroblastoma cell. (I) is useful for prognosing and determining the progress stage of 4 synthesis-period of neuroblastoma. The present sequence is a primer, used to illustrate the invention.
                                                                                                                                                                                                                                                                          Novel nucleic acid obtained from 4 synthesis-period of neuroblastoma cells useful for prognosing and determining progress stage of neuroblastomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Patent No. 6054567

GENERAL INFORMATION:
APPLICANT: Emerson. Suzanne U., Purcell, Robert H.,
APPLICANT: Taszev, Sergel. A., and Robinson, Robin A.
TITLE OF INVENTION: Recombinant Proteins Of
TITLE OF INVENTION: A Pakistani Strain Of Hepatitis E And Their
TITLE OF INVENTION: Use In Diagnostic Methods And Vaccines
NUMBER OF SEQUENCES: 111
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORGAN & FINNEGAN
STREET: 345 PARK AVENUE
CITY: NEW YORK
STATE: NEW YORK
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

Patent No. 6559294

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments

TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preverittle OF INVENTION: and treatment of infection

FILE REFERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 50, Application US/09689065B
